

Final Project: Designing for Inclusive Campus Experience

Project Title:

“Designing a Digital Solution for a Better Campus Experience”

Overview:

Your university wants to develop a digital platform (mobile or web app) to improve students' daily campus experience. The goal is to make it *inclusive*, *usable*, and *accessible* for a diverse student body — including international students, students with disabilities, commuters, and first-years.

Your team will **research, design, and evaluate** a prototype addressing one real problem faced by students.

Problem Options (Choose One):

1. **Campus Navigation:** Helping new or visually impaired students find classrooms and facilities easily.
 2. **Event Discovery:** Helping students discover and RSVP to campus events relevant to their interests.
 3. **Food Access:** Helping students find affordable, dietary-appropriate food options on or near campus.
 4. **Peer Support:** Helping international or first-year students connect with study groups or mentors.
 5. **Resource Finder:** Helping students locate and book shared resources (study rooms, lab equipment, etc.).
-

Deliverables (and Point Breakdown):

Component	Description	Points
1. Contextual Inquiry	Conduct 1–2 brief interviews or observations to understand user needs and pain points. Summarize key insights.	15
2. Persona & Journey Map	Create at least one realistic persona and a journey map describing their current experience with the problem.	15
3. Lo-Fi Prototype	Develop paper or digital wireframes (e.g., Figma, Balsamiq) showing core user flows and layout ideas.	15
4. Hi-Fi Prototype	Create a visually polished, interactive prototype in Figma (or similar). Demonstrate improved usability and inclusivity.	25
5. Inclusivity Heuristic Evaluation	Evaluate your final design using inclusivity heuristics (e.g., accessibility, cultural inclusivity, gender neutrality). Identify at least 3 improvements made based on this evaluation.	20
6. Presentation	Present your design story (5–7 mins) and reflect on what your team learned from the design process.	10
Total		100

Submission Package

Each group submits:

- Contextual inquiry summary (interview notes & key findings)
- Persona and journey map
- Lo-fi and hi-fi prototype (screenshots or Figma link)
- Inclusivity heuristic evaluation report
- Presentation slides
